

## ARMUGHON AND SHODMEHR, TAJIKISTAN

### TEXT

**Shodmehr:** Hello

**Armughon:** Hi. What have you been doing this week?

**Shodmehr:** This week I have been studying in the ACCESS Scholarship program and also going to my Chinese course. I really like sports too, and I'm very proud of my progress in training and studying. Sometimes I read about business, but honestly, I don't meet my friends very often.

And what about you? How do you think AI helps people today?

**Armughon:** AI helps people by making information easy to find. It translates all languages, gives advice, and even helps with studying. Doctors also use AI to detect diseases faster.

How do you think AI will change the future of education?

**Shadmehr:** Yes, AI will make learning more personal for each student. It can give exercises that match your level, and students can study anytime using AI tools.

And how do you imagine the world with AI in 20 years?

**Armughon:** Hmm, I imagine robots helping in homes and schools. But AI will make transport safer and faster. Maybe people will work less and have more free time.

Do you think AI can be smarter than humans?

**Shadmehr:** Well, AI can be faster at solving problems and remembering information. But humans have creativity, emotions, and moral values. So AI might be faster and smart, but

humans have emotions, creativity, and moral values, so AI might be smart, but people will be will always be unique.

And is there anything you'd like to say to kids in other countries?

**Armughon:** Yes! I would like to say that we're all connected, even if we live far away. We should learn from each other and share our cultures. Together, we can make the world a kinder place.
